

Ausenco builds for future growth with Reliance Globalcom

Global engineering services group expands Americas network capability

Sydney, February 2, 2009 – [Ausenco Limited](#), a leading global provider of diversified engineering, project management and operations services, has selected [Reliance Globalcom](#) for the design, implementation and management of a new regional Wide Area Network (WAN) connecting multiple office and remote site locations across Brazil, Peru, Chile and the US.

Reliance Globalcom will implement a fully redundant, managed network service, utilising a hybrid MPLS and IPSec solution to link Ausenco sites across South America back to a central data centre location in the United States.

Reliance Globalcom's award winning MPLS Matrix product will support the delivery of critical financial applications, improving levels of security and redundancy while also enabling higher bandwidth applications to be more easily accessible in remote locations. These elements combine to prove especially critical to the Ausenco group as the company manages the integration of multiple newly acquired businesses with major South American and global operations.

"Our global operations are rapidly expanding in many of the developing markets across the world, where building relationships with local suppliers is critical, said Mr Paul Young, CIO, Ausenco Limited.

"In all the locations we do business, we deliver our services via computer applications, so stability of our networks is vital, as is the global reach of a strong network partner.

"The new system will also ensure more consistent access to the network for all our North and South American offices.

"Reliance Globalcom's proven experience in providing reliable in-country support combined with detailed local market understanding and well established local carrier relationships was the foundation of our decision," said Mr Young.

"Complete transparent network visibility combined with one point of management and billing for our network regardless of the underlying carrier was also important when considering the geographic diversity of our network requirements."

Reliance Globalcom is one of the world's largest integrated telecom providers, able to leverage the world's largest undersea cable system, as well as utilising established relationships with over

700 carriers and service providers around the world. Ausenco was therefore able to access the best selection of in-country and international Internet service providers in each individual national market – an especially important element in the more challenging, emerging telecoms markets in South America.

“Today’s agreement demonstrates Reliance Globalcom’s continuing ability to take a unified network approach with consistent global SLAs, while still providing full local, in-country network support. To businesses like Ausenco whose operations and geographical potential for growth are often based in more challenging and remote locations of developing nations, having a trusted and proven operating partner in these regions is essential”, said Tim Sullivan, Managing Director of Reliance Globalcom Australasia. “The Ausenco network will provide a scalable and resilient service capable of supporting higher bandwidth IP enabled applications while delivering a step-change improvement in global network performance.”

NOTES

About Ausenco Limited

The Ausenco group is one of the top one of the top companies listed in the Australian Securities Exchange (ASX) and provides world leading engineering, project management and operations solutions to the global resources and energy sectors.
